ANIRUDH P M

SENIOR DATA ENGINEER

+91 7907131098 | anirudhparavind@gmail.com | LinkedIn | GitHub | Portfolio

Detail Oriented professional with extensive experience in ETL development, cloud data platforms and BI analytics, aiming to drive scalable, high-performance data solutions using Python, SQL, AWS/Azure, and modern data technologies.

Education

- **APJ Abdul Kalam Technological University** – B.Tech in Mechatronics Engineering – 2020 – 8.09
- **Techolas Technologies, Calicut** – Diploma in Data Science – Nov 2020 – May 2021

Core Competencies

- ETL/ELT Pipeline Architecture
- Data Migration & Transformation
- Data Pipeline Orchestration & Automation
- SQL Query Optimization & Tuning
- API Data Integration & Management
- Metadata Management & Cataloging
- Workflow Scheduling & Observability
- Predictive Analytics & Data-Driven Insights
- Data Quality Assurance & Monitoring
- Big Data Processing
- Real-Time & Batch Data Processing

Technical Skills

- Languages: Python (OOP), SQL
- Data Warehouses: AWS Redshift, Snowflake (learning), BigQuery (learning)
- ETL & Pipelines: Pentaho, Airbyte (learning), dbt (learning), n8n (learning)
- Cloud Platforms: AWS (S3, Redshift, EC2) · Azure (ADLS Gen2, Key Vault, DevOps), RBF
- BI & Reporting: AWS QuickSight, Sisense BI
- Databases: MySQL, MS SQL Server, MongoDB
- Other Tools: Docker (learning), Git, JIRA, REST APIs, FastAPI
- Continuous learning: PySpark, Databricks, dbt, Snowflake, Airbyte, n8n, BigQuery, Generative AI / Agentic AI, AWS Lamda

Profile Summary

- **Accomplished Senior Data Engineer** with 4.5+ years of experience designing and delivering scalable ETL/ELT pipelines, cloud-native data warehouses, and BI dashboards across healthcare and marketing domains, enabling actionable, data-driven decisions.
- **Expert in data migration, pipeline orchestration,** and SQL optimization, with hands-on proficiency in Python OOP, Pentaho ETL, AWS (Redshift, S3, EC2), Azure (ADLS, Key Vault) and dimensional/star-schema modeling to ensure high-performance, reliable, and governed data solutions.
- **Skilled in advanced analytics and BI visualization** using AWS QuickSight and Sisense, applying predictive modeling, monitoring pipeline performance, and leveraging modern data stack technologies (Spark, Databricks, dbt, Snowflake, Airbyte, agentic AI) to build future-ready, intelligent, & scalable data platforms.

Work Experience

Equipo Health Inc., Thiruvananthapuram – Senior Data Engineer – Sep 2024 – Present

- Led the migration of 50,000+ patients and 2 million+ treatment records from a legacy database to a versioned, FHIR-compliant structure using Pentaho ETL and SQL, improving scalability and reliability.
- Designed and implemented weekly data archival pipelines, reducing active database load by 20% while maintaining compliance with long-term storage and regulatory requirements.
- Optimized stored procedures and query logic, accelerating report execution and enhancing operational and clinical analytics performance.
- Developed and deployed AWS QuickSight dashboards with SPICE, enabling stakeholders to make timely, data-driven decisions and boosting report generation speed by up to 80%.
- Created Python-based monitoring scripts and leveraged AWS automation to proactively detect ETL failures, improving pipeline stability, observability and scalability.
- Managed complex client data operations, including migrating 7 clients across 60+ locations to Version 2, and executing a client data split for an existing Version 2 client.
- Streamlined client onboarding by developing an Excel-based ETL pipeline, simplifying the integration of new clients onto the platform.

Gritstone Technologies, Kozhikode – Product Engineer – Backend & Data – Mar 2024 – Aug 2024

- Engineered a modular e-signature product using Python (FastAPI) and MS SQL Server, implementing microservices architecture for scalable, high-performance workflows.
- Integrated Azure ADLS Gen2 and Key Vault to ensure secure document storage and secrets management, meeting enterprise-grade compliance requirements.
- Developed and exposed REST API endpoints for document submission, status tracking, and retrieval, enabling seamless integration with front-end clients.
- Managed CI/CD pipelines via Azure DevOps, automating testing and deployment processes to accelerate delivery and maintain system reliability.
- Delivered a fully functional microservice to UAT within a short tenure, showcasing rapid design, development, and deployment capabilities.

iSOCRATES MADTech Pvt. Ltd., Mysuru – Associate Data Engineer – Nov 2021 – Feb 2024

- Built end-to-end ETL pipelines for multi-channel marketing data ingestion into AWS S3 and Redshift, handling structured data from display, search, and social platforms.
- Developed a reusable Python OOP-based ETL framework that reduced new data source onboarding time by 10–20% and accelerated pipeline development and client integration.
- Designed star-schema data models in Redshift to support campaign performance analytics, enabling comprehensive cross-channel reporting for marketing stakeholders.
- Created Sisense BI dashboards and applied predictive analytics (regression, clustering) to optimize marketing spend, boosting CTR, conversions, and ROI for clients.

Certifications

- **AWS Cloud Quest: Generative AI** — Amazon Web Services (Badge)
- **Data Engineering Bootcamp** — Grow Data Skills
- **Databricks Academy Accreditation: Databricks Fundamentals** — Databricks
- **Databricks Academy Accreditation: Generative AI Fundamentals** — Databricks
